

Serial No.: 09/847,993
Atty. Docket No.: P66599US0

IN THE SPECIFICATION:

On page 2, please amend the second full paragraph on page 2, as follows:

--The present invention is directed to suppressing upper and lower significant sidebands by modulating an information signal with a modulation index M of not greater than 0.2 to generate a narrowband FM or PM information signal having a small frequency deviation at the transmitting side of a narrowband communication channel.--
